

Organization of Application

Monday, March 21, 2022 6:06 PM

- **(Project root)**
 - **(src)**
 - index.js
 - App.js <----- Main component of our application
 - **(components)** <----- we should keep our reusable components in a separate folder
 - AppHeader.js
 - AppFooter.js
 - Menu.js
 - StarRating.js
 - Heart.js
 - **(screens)** <----- components that are representing one whole screen
 - BookListScreen.js
 - BookDetailsScreen.js
 - BookAddScreen.js
 - index.css <----- stylesheet for my application
 - **(public)**
 - Index.html <----- this is where React code shall be injected
- package.json <----- configuration scripts etc
- **(node_modules)** <----- files downloaded for app development

IMPORTANT

- Git-update doesn't push **node_modules**
- After a **git pull**
 1. copy the current folder in **my-works**
 2. Go to the folder
 3. Do an **npm i**
