

# Handling Business Logic

---

Wednesday, March 23, 2022 3:49 PM

- Our application also needs to include business logic which is not part of the UI
- The business logic should be called by the UI to take necessary action
- Business logic may include
  - Getting data from the server
  - Writing business rules such
    - Is the game over?
    - Who won the game?
  - Manipulating the data
- We generally keep business logic in a separate folder under 'src'
- (project-root)
  - (src)
    - (components)
    - index.js
    - App.js
    - **(services)**
      - Our business logic should be here
      - **TicTacToe.js**
