

React Warnings and Errors

Tuesday, March 22, 2022 2:49 PM

The image shows a web browser window on the left and a VS Code editor on the right. The browser displays the text "Tic Tac Toe Header" and "Tic Tac Toe Game". The console shows a warning: "Warning: Invalid DOM property `class`. Did you mean `className`?". The warning is highlighted with a yellow box, and a blue arrow points to it with the handwritten text "You get Good suggestion". A red circle highlights the word "class" in the warning, and a red arrow points from it to the word "class" in the JSX element in the code editor. The code editor shows the following code:

```
1 import React from 'react';
2
3 const Header = () => {
4   return (
5     <div class=header>
6       Tic Tac Toe Header
7     </div>
8   )
9 };
10
11 export default Header;
```
