## Interfacing with Router API in our component

- We need to access router API in our component

## Use Case — How do I access the isbn number from the url

<http://localhost:3000/book/info/1234>

## How to Access Router API

- There are two ways we can handle it

### 1. Using HOC

- Router provides an HOC to access the route api as prop of our component

#### 1. `withRoute`

- Depreciated in V6.
- Available in older version

### 2. using Hooks

- React Router provides hooks to access route information and other features
