

Creating Objects with Property and Methods

Thursday, March 10, 2022 5:56 PM

```
oo:js > JS oo06-object-prop-and-method.js > ...
2
3  var p= {
4      name: 'Sanjay',
5      age:45,
6      show: function(){
7          console.log('Person [ Name='+this.name+'\tage='+this.age+"]");
8      }
9  };
10
11
12  p.eat=function(food){
13      console.log(this.name+" eats "+food);
14  }
15
16  p.show();
17  p.eat('Lunch');
18
```

Why we are using 'this' with name but not v

- name is an internal property of the object
- food is an external argument

How do we create several person?

- Each will have
 - Name
 - Age
 - show()
 - eat()
