Truthies and Falsies

Wednesday, March 9, 2022   5:17 PM

- Javascript supports boolean type that can have value 'true' and 'false'
  - Example
    - 7 > 4 —-> true
    - 8 % 2 == 1 --> false

- Apart from **true** and **false,** java script conceptually treats non Booleans value also as true and false when used as conditions

- A Truthie is a set of all values shat will be treated as true. It includes
  - true
  - All non 0 numbers
  - All non empty strings
  - All array (including empty array)
  - All Objects except null

- A Falsy
  - false
  - 0
  - '' (empty string)
  - null
  - undefined
  - NAN (Not a Number)
