Npm scripts

Wednesday, March 16, 2022   5:06 PM

- Package.json also includes a script section
- It contains some named commands that we can run with the help of npm

Package.json

```
{
…,
    scripts:{

        "hello":"echo hello",
        "clear":"del *.tmp",
        "test": "echo testing",
        "update" :"git-update-branch updating",

    }

…
}

}
```

To run a script

```
$ npm  run hello

$ npm run test
```

Special Cases

- There are two special script names
  - Start
  - Test
- They can also be executed without 'run' word

```
$ npm test

$ npm run start

$npm start
```
